

SARS IMAGING AT AIRPORTS (COLD SYMPTOMS CAN BE SEEN)

Sars imaging at airports failed because the application exceeded their expertise. Infrared equipment manufacturers didn't appreciate the fact that they do not have the hours in the field using their technology. It is like a Boeing employee trying to fly a plane.

In one year there wasn't one image produced by equipment manufacturers even though people with colds stood in front of the technology. Their representation set me back years because I had to overcome the negative press that went out all over the world.

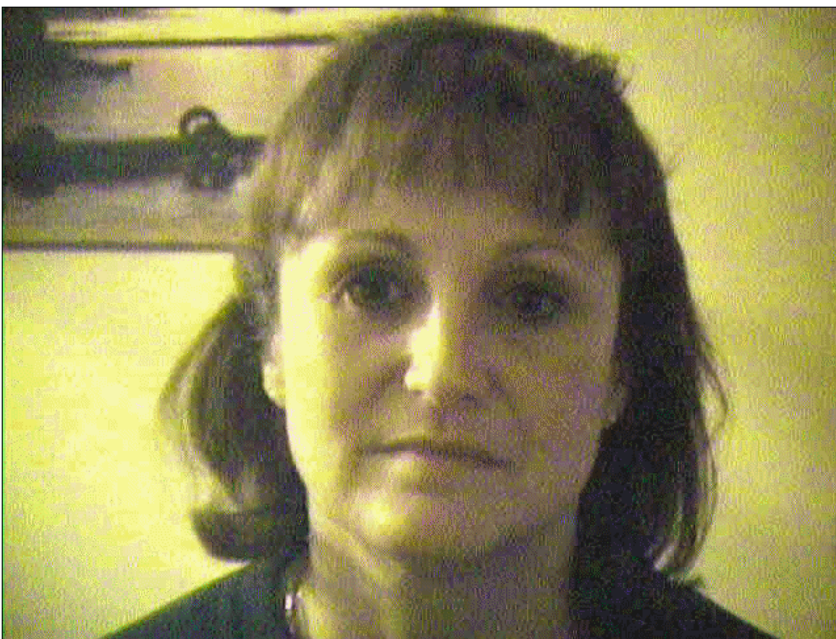

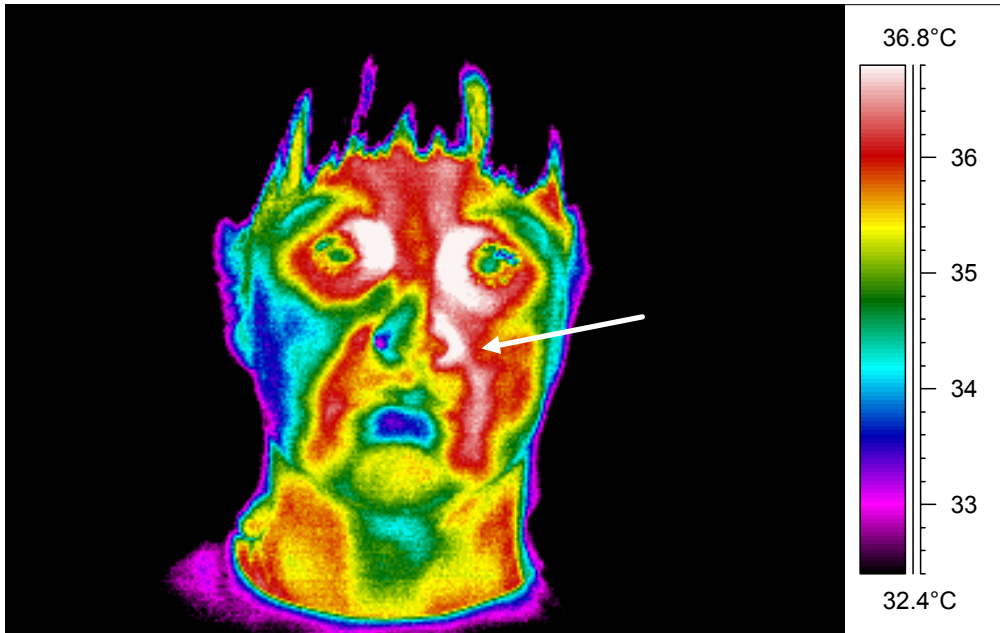

Toronto, Canada and the world suffered economic crisis, deaths and challenges in seeing symptoms of Sars. I saw nurses with masks and thermometers looking for cold symptoms.

The Energy Medicine Conference in Toronto is going to show how energy applications with non invasive technology can let you see cold symptoms, inflammation, lack of and changes in physiology with any treatment. It could have been done on the plane, hospital, quarantine, clinic or home.

The subject to the left offered to be imaged to see if she had a cold.

DOC, I DON'T FEEL WELL. CAN YOU SEE IT?

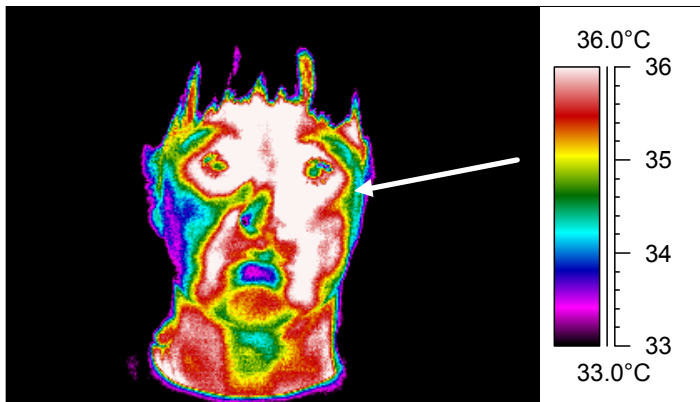

IR information	Value
Date of creation	12/30/2002
Time of creation	8:39:30 PM

CAN YOU SEE IT NOW?

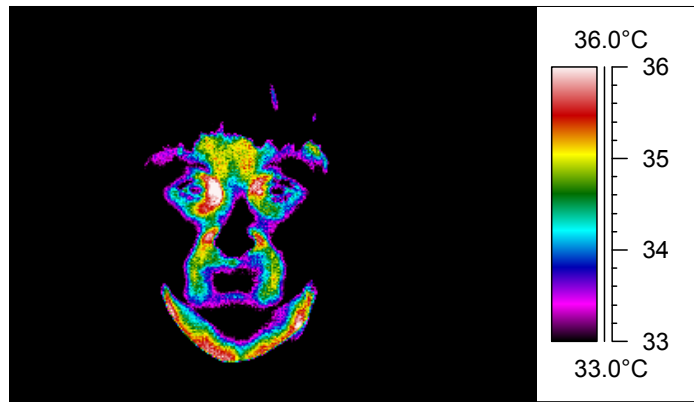

Inflammation is simply elevated temperature and we are expecting relative symmetry between sides of the face. Use the zoom feature of the viewer for a closer look at the temperature image. This is an example of a patient or a passenger with flu symptoms.

Go to the next page to see changes in physiology with time and treatment.

Cold Complaint

No Cold Symptoms

The images above are over the same span of temperature as you can see by the scales to the right of each temperature image.

Do you think this information would have been appreciated by health professionals? Their unions weren't aware there were imaging applications available to help.

The infrared equipment manufacturers failed so miserably, they weren't able to produce one image in a year for the Canadian Government. I replied to media that they failed because the imaging application exceeded their expertise. I had the only team available with an existing imaging application as you can see here. http://www.thermoguy.com/pdfs/SARS_-_Airport_Screening.pdf

What are you going to do during your next Pandemic? Come to the Energy Medicine Conference in Toronto and get the most progressive education available anywhere in the world. www.ihfglobal.com

Here is a link to some SARS information, search online and there are millions of references online. <http://www.ctv.ca/generic/WebSpecials/sars>
